week 9	rinse with fresh water for entire 9th week								

GENERAL MIXING INSTRUCTIONS:

Fill Reservoir with fresh water
 First add Coco A, stir well and then add Coco B
 Adjust PH to 6.3 then add appropriate additives
 Do not adjust Ph after adding additives

WEEK 6,7 & 8 MIXING INSTRUCTIONS:

Fill Reservoir with water and add Base Nutrients & other Additives to achieve PPM of 840 (EC1.2) mix well and adjust ph to 5.8
 Mix required amount of Shooting Powder in bucket with small amount of water until dissolved and add to reservoir.
 Do not adjust Ph after adding shooting powder

** SHOOTING POWDER **

Use 1 sachet per 25 gallons week 6
 Use 2 sachets per 25 gallons week 7 & 8

*** ROOTS EXCELURATOR ***

During weeks 6,7,8 Shooting Powder must be used in conjunction.
 If you are NOT using Shooting Powder do NOT use Roots Excelurator during those weeks

DRIP CLEAN

Using drip clean makes it impossible for salt to build up in the grow medium
 This allows us to safely feed the plant every watering

Shooting Powder is Extremely Potent ! It should only be used on plants that are 100% happy and healthy.
